Table Top with a Reciprocal Coder

The Table Top System was developed for manual or semiautomatic coding requirements to imprint pricing, date codes, lot numbers, product identification and expiration dates.
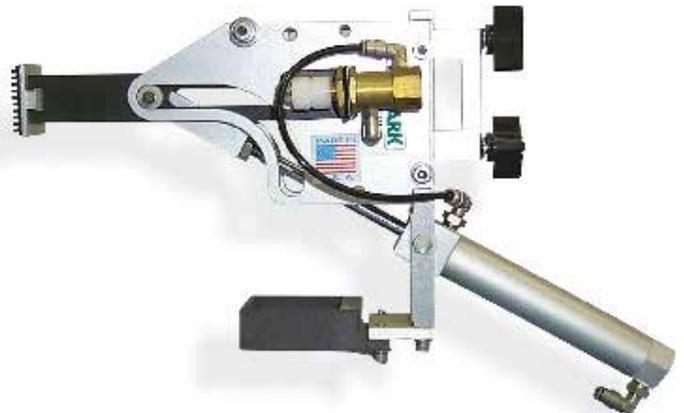

The Table Top coding system is ideally suited for unique packages that are typically run manually such as plastic bags, pouches, metal cans, chipboard boxes, electrical components, and automotive parts.

The US-4300 Coder is an air operated reciprocating coding system, foot activated by the operator to print on both absorbent and nonabsorbent surfaces.

The US-4300 Reciprocal Coder uses our fast dry, disposable ink cartridges and inexpensive rubber type.

The US-4151 includes all brackets, controls and foot pedal actuation for complete manual coding flexibility and portability.
