

MRC

Multiple Row Coder

The Simple and Cost Effective system for multiple row package coding on all horizontal form/fill/seal packaging machines such as Multivac, Mahaffy & Harder, Tiromat and Dixie.

Benefits

- Eliminates the need for multiple printheads.
- One piece Cast Coder, means no parts replacement.
- Disposable ink cartridge provides lowest cost per package.
- PLC control ensures pinpoint package code registration.

How the MRC works

The MRC's bracket, which is air driven and PC controlled, moves vertically up the web to code up to three rows of packages with a single pass. This feature helps eliminate the need for multiple printheads.
